Anbohrhilfe mit Bohrschablone

*Centering Device with Drilling Template*  
**3583A**

## Drilling preparation

- Mark the spot that has to be drilled with a cross.
- Remove both wing screws.

## Adjustment and fixing

- Roughly adjust the water collection ring with the template on the cross and fix the suction base on an even surface.
- Then adjust the water collection ring a second time. By means of the scale for the drilling diameter (see picture), the water collection ring is adjusted on the horizontal line of the cross and with the V-notch on the vertical line.
- Now first tighten the wing screw on the water collection ring and then the wing screw on the suction base. So you reach an optimal sealing on the wall.
- Connect the water suction hose.

The maximum drilling diameter is 25 mm, whereby there is no centring aid between 12 and 25 mm.
